PROCURAI — Sample Procurement Specification

Fictional test document created for software development and testing only

Important notice: This is synthetic sample data, not an official tender, not an actual procurement notice, and not an authoritative Indian Standards reference. Do not use it for real purchasing or compliance decisions.

1. Procurement Overview

A public facility plans to procure low-voltage electrical cables for an internal building installation. The procurement team needs to review the technical requirements and identify which verified Indian Standards may apply. Any standards recommendations must be checked against authoritative, current sources by a qualified reviewer.

2. Technical Requirements

ID	Requirement	Value / Description	Notes for analysis
R1	Product type	Electrical cable for building installation	Identify product category and intended use
R2	Rated voltage	1.1 kV	Preserve value and unit exactly
R3	Insulation	Suitable insulation required	Wording is vague; flag for clarification if needed
R4	Fire performance	Fire-safety performance to be specified	No test method or rating supplied
R5	Testing	Supplier shall provide test documentation	Identify what evidence is actually stated
R6	Quantity	500 metres	Commercial detail; likely not a standards-matching requirement

3. Additional Notes

• The document intentionally includes vague wording so the prototype can test requirement extraction and specification-gap detection.

• The system should not invent an Indian Standard number or claim compliance without a verified source.

• If no authoritative matching evidence is available, the expected safe result is “Needs human verification” or “No verified match found.”

4. Expected PROCURAI Output (for testing)

Extract structured requirements R1–R6; distinguish technical requirements from commercial details; flag the fire-performance wording as underspecified; search only a verified standards dataset; show source evidence for any recommendation; and clearly mark unverified matches for human review.
